

Integrated Hospital System is a Customized version of award winning DHCP/Vista Hospital System. CIS has added a GUI front end to the Patient Registration module.

This customization uses the same technology used by VA Technology Dept to develop CPRS and PCMM .

It is a stand alone module without any modification to the database or stored procedures. It makes it much easier to apply any future system updates from the VA.

Patient Demographic 1 of 2

The screenshot displays the 'PATIENT DEMOGRAPHIC' application window. The main window has a menu bar with 'File' and 'Help', and a tabbed interface with five tabs: '1 Patient Demographic', '2 Insurance', '3 Scheduling', '4 Billing History', and '5 CPRS link'. The 'Patient Demographic' tab is active, showing a form with fields for Name, SSno, Add1, Add2, City, State, W Tel, H Tel, E-Cont, E-W No, and Relat. A search window titled 'PAT REGISTRATION' is open over the Name field, displaying a list of names: 'ART,ANSALONE', 'ELENA,FIALKOVA', and 'MANILOV,MAT'. The search window includes a 'Find' button, a 'Find again' button, and 'Select', 'Insert', and 'Cancel' buttons. The main window also has a 'Find' button and a 'Save new' button. The bottom right corner of the main window has an 'Exit' button. The text 'Centrahs Info Sys copyrighted' is visible at the bottom of the main window.
